### Business Fixed Wireless Service Speeds

- Severe weather conditions such as heavy rain, hail, or snow (*Rain Fade*), and violent winds.
- Signal Quality, Signal Strength, and/or external sources of radio interference.
- Line of Sight obstructions in between the antenna and the radio tower (*such as trees and buildings*).
- Radio tower capacity.

### Factors that can affect local (end user) network speeds within the premises:

- Performance of end user’s network equipment (such as routers, switches, WiFi extenders, or power-line adapters).
- Connecting to the router via WiFi instead of an Ethernet LAN cable.
- Quality of internal data cabling (*if present*).
